Workbook Section Seven: Designing Your Teams, Tools, and Human-AI World

Curtis Loop · CIT 140 Week 3 · Stakeholder Map · Meridian Forge QA Control Review

PROMPT 32 · TOOL AND TEMPLATE INVENTORY

> *List 3 to 5 practical tools, templates, or supports in your system. What does each one help the participant build, decide, or navigate? Applied here to the stakeholder consultation as the working experience.*

1. **Stakeholder register** recording role, need, influence, authority and source for each person. Helps participants see where they sit and what is claimed about them, and makes unfilled roles visible as entries rather than as absences.
2. **Consultation plan grid** listing who, question, method and when. Helps participants navigate scheduling, and surfaces the daytime versus night-shift conflict as a decision to be made rather than an oversight.
3. **Interview note with validation checkback.** The note returns to the person who gave it for confirmation or correction. Helps a contribution become evidence instead of an impression, and gives affected people a way to review what was recorded about them.
4. **Missing-contacts log, dated.** Records who was asked, on what date, and whether they answered. Helps the group navigate gaps honestly, and keeps silence recorded as silence rather than as consent.
5. **Competing-needs record** holding both needs, the supporting evidence, and a proposed way through. Helps participants decide a tradeoff without the analyst's proposal being presented as their agreement.

PROMPT 33 · IDENTITY AND ROLE SUPPORT

> *Write 3 identity-building questions that help participants explain the knowledge, responsibility or perspective they bring to the work.*

1. What part of this work do you personally do, and what would someone miss if they only read the records about it?

2. What are you responsible for here, and which decisions are explicitly not yours to make?

3. Whose account would you want checked against yours before this is treated as settled?

HOW THESE QUESTIONS IMPROVED MY CONSULTATION PLAN

Question 2 changed the structure of the plan. I had grouped people by department with one question per group. Separating responsibility from authority in every entry is why the plan now records that Elias Chen advises on technical feasibility without owning the records or approving spending, and that Mara Ilyan routes the recommendation to the sponsor without being the spending approver.

Question 1 changed my choice of method. Because the knowledge I need from the night-shift operator is about practice rather than policy, the plan proposes a brief on-shift conversation at the workstation instead of adding that person to the daytime meeting.

Question 3 changed how I plan to validate. Each account is now recorded with a named route for checking it, which is what keeps a person's statement distinguishable from a verified record.

No stakeholder answers are recorded here. The questions are prepared for consultation that has not yet taken place, and the night-shift operator has not been selected.

Attention First, Workbook Section Seven, prompts 32 and 33. Typed equivalent submitted in place of a page capture; the source is an ebook edition without fixed page numbering.
